

You Deliver the Innovation. We'll Deliver the World.

For years, bioscience-based innovations have had a significant impact on the way in which P&G's leading brands improve the quality of everyday life. Better enzymes and surfactants increase the cleaning performance of household and beauty products. Advanced delivery mechanisms improve the efficacy and safety of pharmaceuticals. While other bioscience-based innovations improve the nutritional value of pet food and reduce the calorie content of snacks.

The vital role of bioscience-based innovation is increasing steadily, and P&G Global Bioscience is committed to being at the forefront of these advancements by developing highly collaborative and mutually beneficial partnerships with the world's top researchers. And with more than 300 trusted and market-leading brands, 22 of which exceed \$1 billion in annual sales globally, we've got a world of bioscience-based innovation needs in a variety of different commercial applications and consumer.
